# LAB PROGRAM 8:

Write a program which creates two threads, one thread displaying "BMS College of Engineering" once every ten seconds and another displaying "CSE" once every two seconds.

```java
package Thread;

class MessageThread extends Thread  {
    String message;
    int delay;
public MessageThread(String message,int delay){
    this.message=message;
    this.delay=delay;
}
public void run() {
    while (true) {
        try {
            System.out.println(message);
            Thread.sleep(delay);
        }
        catch (InterruptedException e) {
            System.out.println("Thread Interrupted");
        }
    }
}
}
```

```java
package Thread;

public class Threadmain {

    public static void main(String args[]) {
        MessageThread t1=new MessageThread("BMS COLLEGE OF ENGG", 10000);
        MessageThread t2=new MessageThread("CSE" , 2000);
        t1.start();
        t2.start();
    }
}
```

<terminated> Threadmain [Java Application] C:\Users\trupt\.p2\pool\plugins\org.eclipse.justj.openjdk.hotspot.jre.full.win32.
